PROFESSIONAL SUMMARY

UI Engineer with over 7 years of experience building scalable enterprise ecosystems. My focus is on front-end architecture, Micro-Frontends (MFE), and modernizing complex systems using reactive state management. Operating as a hands-on engineer, I consistently take end-to-end technical ownership of my projects—from architectural design and zero-incident CI/CD deployments to mentoring peers and leading agile frontend delivery. I actively bridge the gap between business requirements and engineering execution, preparing complex systems for long-term scales.

CORE EXPERTISE & SKILLS

- **Architecture:** Micro-Frontends (MFE), Module Federation, Reactive State (Signals, NgRx SignalStore).
- **Frontend:** Angular (v2-20+), TypeScript, React, RxJS, AG Grid, Angular Material, GraphQL, Sass, HTML, CSS.
- **Backend, Testing & CI/CD:** Java (basic), REST APIs, Git, Jenkins, OpenShift, Azure, GitHub, BitBucket, Jasmine, Karma.
- **Engineering Leadership:** E2E Project Delivery, Cross-team Mentorship, Sprint Planning, UI/UX Collaboration.

PROFESSIONAL EXPERIENCE

SS&C Technologies | **UI Engineer** | Hybrid, Bucharest | Sep 2025 – Present

- Collaborated with UI Leadership to architect and deliver 8 distinct Micro-Frontends from scratch, successfully transitioning core enterprise platforms from a monolithic shell.
- Executed the platform migration to Angular 20, replacing legacy lifecycles with modern reactive patterns using Signals, `viewChild()`, and `inject()`.
- Engineered dedicated NgRx stores to manage and persist complex search, filtering, and configuration states.
- Maintained and evolved internal SDK contracts by updating OpenAPI specifications, ensuring strict cross-MFE type consistency and reliable backend alignment for generated clients.
- Led the end-to-end engineering of critical system modules, including bulk data import/export workflows, advanced permission administration flows, and GraphQL-driven data migrations.
- Developed a centralized shared component library featuring over 25 reusable elements, including Virtual Scrolling Trees and Data Tables with dynamic inline filters.
- Enforced strict adherence to design layouts across all frontends via a global grid system, design tokens, and SCSS variables.

- Achieved full WCAG accessibility compliance across the platform by programming advanced ARIA attributes and rigorous focus management in dialogs.

Cognizant | Frontend Developer & Interim Team Lead | Remote | Jan 2023 – Sep 2025

- Architected and developed an 11-flow modular Angular application for a Banking Fraud Targeting Platform, implementing role-based access control (RBAC).
- Integrated AG Grid to process and visualize 50,000+ records for bulk-action investigations and live monitoring.
- Acted as Interim Team Lead, managing frontend architectural decisions, CI/CD pipeline deployments, and sprint planning.
- Achieved zero production incidents from the first release.
- Directed the UI/UX lifecycle in the absence of a dedicated designer.
- Mentored team members on Angular best practices and Jasmine unit testing.

Deloitte Digital Romania | Frontend Developer | Remote | Oct 2021 – Dec 2022

- Acted as the sole frontend developer for a banking application, building client profile and loan management interfaces using React, TypeScript, and Mambu.
- Took ownership of Java-based PDF report generation code and resolved backend bugs to maintain continuous integration during resource shortages.
- Developed interactive UI modules for an insurance platform (Angular, RxJS), allowing users to create, edit, and deactivate active policies.

IBM | Frontend Developer | Remote / Bucharest | Dec 2018 – Oct 2021

- Managed frontend development for a micro-frontend e-commerce platform serving 6 distinct brands using Angular and AEM.
- Implemented feature toggling for beta programs and managed performance and ARIA accessibility optimization.
- Investigated and resolved a critical production incident for the checkout system.
- Architected offline-first tablet applications for insurance field staff using Angular and Ionic, implementing local storage and automated synchronization.
- Engineered with a mobile vulnerability assessment app and a centralized document platform with advanced metadata search.
- Redesigned a purchasing flow MVP using React and GraphQL with dynamic, step-dependent forms.

EDUCATION

Romanian-American University, Faculty of Managerial Informatics | Bucharest, Romania

- **Master of Science in Economic Informatics** (Grade: 9.66/10.00) | 2018 – 2020
- **Bachelor of Science in Economic Informatics** (Grade: 9.50/10.00) | 2015 – 2018
