PROFESSIONAL SUMMARY

UI Engineer with **7+ years** building complex enterprise web applications in Angular and TypeScript — micro-frontends, data-heavy interfaces, and design-token systems used by real people under real pressure. What sets me apart from a purely “how it’s built” engineer is where my instinct goes first: how a product should *work and feel* for the person using it. I’ve owned UI/UX direction end to end — at Cognizant, holding full decision-making authority over a fraud platform’s UI/UX — and colleagues have twice called me the team’s “unofficial screen designer.” I work at the seam between engineering, UX and product: challenging requirements so stories come out better structured, deciding what an interface needs to do, and making complex, permission-heavy workflows feel simple.

CORE EXPERTISE & SKILLS

Product & UX: UI/UX ownership, user flows & states, requirement discovery, accessibility (hands-on WCAG/ARIA), Figma & design tokens.

Architecture & Frontend: Angular (v2–20+), TypeScript, Micro-Frontends (MFE), Module Federation, Reactive State (Signals, NgRx SignalStore), RxJS, React, AG Grid, Angular Material, GraphQL, Sass.

Backend-adjacent, Testing & CI/CD: Java (basic), REST APIs, Git, Jenkins, OpenShift, Azure, Jasmine, Karma.

Leadership: E2E delivery, cross-team mentorship, sprint planning, stakeholder communication.

PROFESSIONAL EXPERIENCE

SS&C Technologies — UI Engineer

Hybrid, Bucharest · Sep 2025 – Present

- Collaborated with UI Leadership to build and deliver features across **8** distinct Micro-Frontends, supporting the transition of core enterprise platforms from a monolithic shell.
- Executed the platform migration to **Angular 20**, replacing legacy lifecycles with modern reactive patterns using Signals, `viewChild()`, and `inject()`.
- Engineered dedicated NgRx stores to manage and persist complex search, filtering, and configuration states.
- Maintained and evolved internal SDK contracts by updating OpenAPI specifications, ensuring strict cross-MFE type consistency and reliable backend alignment for generated clients.
- Led the end-to-end engineering of critical system modules, including bulk data import/export workflows, advanced permission-administration flows, and GraphQL-driven data migrations.
- Extended and maintained a shared component library (**25+** reusable elements), personally building complex components such as virtual-scrolling trees, data tables with dynamic inline filters, and multi-select autocompletes.
- Applied and enforced the team’s design standards — global grid, design tokens, and SCSS variables — to keep the UI consistent across all frontends.
- Achieved full **WCAG** accessibility compliance by programming advanced ARIA attributes and rigorous focus management in dialogs.

Cognizant — Frontend Developer & Interim Team Lead

Remote · Jan 2023 – Sep 2025

- Held full decision-making authority over the platform's UI/UX direction, balancing intuitive design for fraud agents with technical feasibility — acting as the team's unofficial screen designer.
- Architected and developed an **11-flow** modular Angular application for a Banking Fraud Targeting Platform, implementing role-based access control (RBAC).
- Integrated AG Grid to process and visualize **50,000+** records for bulk-action investigations and live monitoring.
- Acted as Interim Team Lead, managing frontend architectural decisions, CI/CD pipeline deployments, and sprint planning.
- Achieved **zero** production incidents from the first release.
- Mentored team members on Angular best practices and Jasmine unit testing.

Deloitte Digital Romania — Frontend Developer

Remote · Oct 2021 – Dec 2022

- Acted as the sole frontend developer for a banking application, building client-profile and loan-management interfaces using React, TypeScript, and Mambu.
- Took ownership of Java-based PDF report generation and resolved backend bugs to maintain continuous delivery during resource shortages.
- Developed interactive UI modules for an insurance platform (Angular, RxJS), working closely with the product designer to map and improve application flows.

IBM — Frontend Developer

Remote / Bucharest · Dec 2018 – Oct 2021

- Managed frontend development for a micro-frontend e-commerce platform serving **6** distinct brands using Angular and AEM.
- Implemented feature toggling for beta programs and led performance and ARIA accessibility optimization.
- Investigated and resolved a critical production incident for the checkout system.
- Built offline-first tablet applications for insurance field staff using Angular and Ionic, implementing local storage and automated synchronization.
- Delivered a mobile vulnerability-assessment app and a centralized document platform with advanced metadata search.
- Redesigned a purchasing-flow MVP using React and GraphQL with dynamic, step-dependent forms.

EDUCATION

Romanian-American University — Faculty of Managerial Informatics, Bucharest

Master of Science in Economic Informatics · Grade: **9.66/10**

2018 – 2020

Bachelor of Science in Economic Informatics · Grade: **9.50/10**

2015 – 2018
